## THE MARK OF THE BEAST

The bible is full with fulfilled prophecies, but also full with prophecies which still have to be fulfilled. A prophecy of about 1910 years ago, which is in process today and gets closer to its fulfillment, goes about the number of the beast:

*"And he [the beast] causeth all, both small and great, rich and poor, free and bond, to receive a mark in their **right hand**, or in their **foreheads**: and that no man might buy or sell, save he that had the mark, or the name of the beast, or the number of his name. Here is wisdom. Let him that hath understanding count the number of the beast: for it is the number of a man; and his number is **Six hundred threescore and six**." (Revelation 13:16-18)*

Before we will pay attention to the place of the mark, let us have a look at the mark itself. We see in verse 17, that nobody can buy or sell, except the ones who have the mark, or the name of the beast, or the

number of his name. And in verse 18 we see, that it has to do with the number six hundred sixty six.

As known, in shops the barcode is being used already for many years. Because this code is being read by a laser apparatus, to pay at the counter goes rapidly.

A study of the different numbers under the bar code shows, that the figure six is the only one with two thin lines close to each other. Further we see, that the first lines, the middle and the last lines of the barcode are also close to each other and could be read as **666**.

Let us now have a look at the place of the mark:

The microchip can not be thought away of our daily life. Especially when it concerns financial traffic. Nowadays also the study of the microchip continues and the financial institutions agree that the most secure form to pay is reached if people will have implanted a microchip.

Such a microchip then must be fed by the body itself. This microchip with the size of a grain does exist and contains a sender and a chargeable battery. The battery is being fed by a warmth coupled circuit, which produces voltage through changing body temperature.

The scientists have found only two suitable and efficient body places for the microchip: the **forehead** and the back of the hand, especially the back of the **right hand**.
